

Instruction for use **Stingray „counter“**

Technical subject to change.

The electronic counter on the lid of the waterfilter **Stingray** shows the remaining longevity of the filter cartridge. With the Aqua Select waterfilter cartridge you can filter up to 100 l hardness and 150 l chlorine – depending on the water quality.

At the 1st time of usage and after each replacement of the cartridge please press the restart button above the display for more than 3 sec. - The electronic counter now is activated and shows "150".

Each time you pour water through the orifice in the lid, the electronic counter will count back. When it shows "0" – you have to change the cartridge.

If you use this waterfilter to reduce the hardness in your water you have to change the cartridge when the "counter" shows "50" latest.

Specification:

3V

Operation temperature: 0 – 40° C

CE This equipment is in compliance with the essential requirements and other relevant provisions of Directive 89/336/EWG
